

Analysis:¶

Loan amount, interest rate, Dti, revol_bal and revol_util are generally more in each category for charged off than those who have fully paid the loans. Whereas, annual income and total payment are high for those who have fully paid the loans. Interest rates are always higher for those who have defaulted.

Term:

loans of 60 months have high median for income, int_rate, total_pymnt, revol_bal, revol_util, dti. Also those that have been charged off have low income and payment but high int_rate, dti, revol_bal and revol_util.

Grade:

Grade G loans are highest medians in all numeric. Also charged off loans have comparatively higher int_rate, dti, revol_bal and revol_util, with low income and payment.

Purpose:

Loans for small business, debt_consolidation, home_improvement have highest amounts. They have higher income, and interest rates are highest for credit cards. Also charged off loans have low annual income but high int_rate, dti, revol_bal and revol_util.

Emp_length:

Older employees have higher loans, higher income, higher payments as well as higher dti. But int_rate across employment years are same. Also charged off loans have lower income but higher int_rate, dti, revol_bal and revol_util.

Home_ownership:

Those that have mortagage have high income, loan amount and revol_bal, but int_rates are similar across home_ownership. Also charged off have higher int_rates, dti, revol_bal and revol_util but low income.

Verification status:

Verified loans are higher in amount, int_rates, income and all other numerics. Also charged off loans have comparatively higher int_rate, dti, revol_bal and revol_util, with low income and payment.
